

TECHNICAL DATA SHEET

PRODUCT:

Active liner for fresh blueberries.

CODE:

PTBAG043

DESCRIPTION:

Plastic liner for packaging and preservation of blueberries.

CHARACTERISTICS:

Low density polyethylene (LDPE) with sodium metabisulfite as active ingredient.

PERFORATION:

Diameter of the perforation 5mm. -
vented area: 0,1%

COLOR:

Clear (no color)

LABEL COLOR:

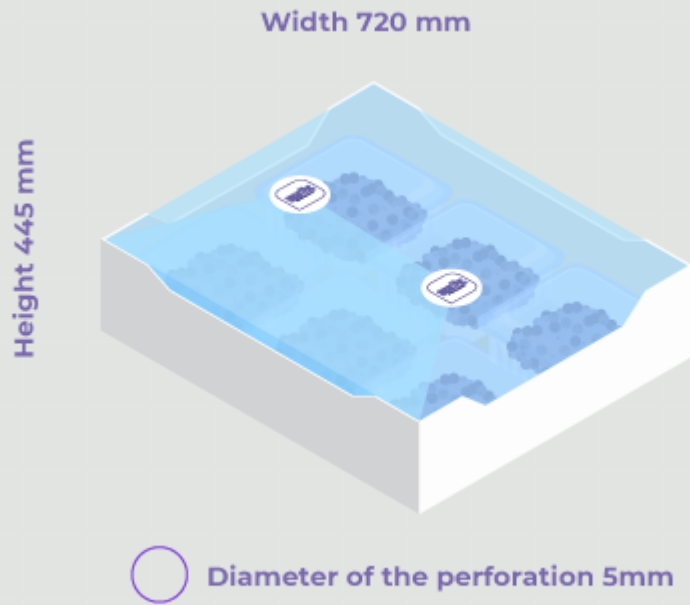

Purple (Pantone 265C)

SIZE (MM):

720mm x 445mm (Width x Height)

WEIGHT:

29 g.

• PACKAGING

Plastic bag with 500 units.

• STORAGE

Keep the liners in the original polyethylene bag. Store them in a fresh and dry place, avoiding humid conditions. The liners should be used within the first 24 months from manufacturing date.

• MODE OF USE

To be used in a 40x30 cms box with 2,5 up to 4 kg of fruit in clamshells or bulk. Open the liner and place it inside the box at the beginning of packaging process. Put the fruit inside the liner and close it with one or two stickers. Precool as soon as possible after packaging and store & transport at 0°C +/-0.5°C. An external SO₂ sanitation before packing is recommended.

Do not include other type of packaging materials inside the liner (absorbent tissue or paper sheets): only well vented punnets or clamshells should be used. When healthy fruit is packed, and adequate storage and transportation practices are followed, SmartPac liner offers a protection period of up to 6 weeks.

• IMPORTANT

Not withstanding the information contained in this technical sheet, due to the unknown nature and variability of factor involved in growing, picking as well post harvest handling of blueberries, we do not assume responsibility for any direct or indirect damages arising from the use of this device, even if technical data set recommendation are followed.
